

COOLGRASS®

Counters the effects of infill increasing surface temperature

Creates a synthetic grass which is more comfortable to play on

...innovation that keeps synthetic grass cool

Exclusive in Australia to:

TEAM *sports*

Coolgrass®

Across the world, synthetic turf is becoming increasingly popular as a practical and cost effective alternative in locations where natural grass is unable to perform.

For both sport and landscaping our specialist grass products are helping to transform the environment.

Coolgrass® is the latest market-leading innovation that keeps synthetic grass cool by reflecting UV rays and dissipating heat back into the atmosphere.

TECHNOLOGY

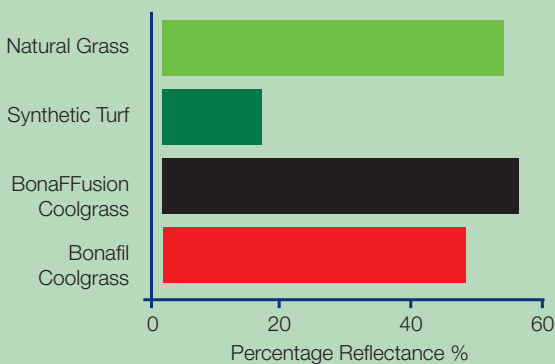

Using the most advanced pigment technology available, adapted from defence force research activities, Bona Yarns have developed Coolgrass® to enhance comfort levels when using synthetic turf, especially in the world's warmer regions like Australia.

OPTIMAL UV REFLECTION

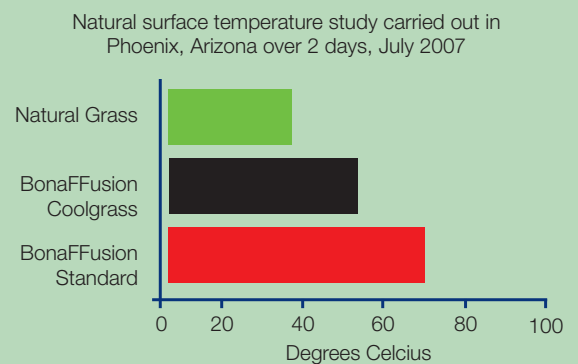

Coolgrass® performance relates to the amount of surface area of Coolgrass® fibre available to reflect UV rays. TEAM's experience processing yarn fibre into design specific synthetic grass products ensures exceptional performance characteristics.
